Research Proposal

Social Media is a good resource that helps everyone to get information and we can know what is happening around us. Also, people use social media to be connected with their families or even friends. However, social media can have a profound effect on people who do not use social media in a good way. Some people use social media to try to affect other people without keeping in mind how dangerous can be. It can be dangerous for the victim, but also dangerous for who trying to affect others.

I want to do my research paper about social media because a lot of things are happening because of social media. Also we all use social media even though some people use social media more than others. I have three questions about this topic to open my mind of what I would like to learn and get more information about how social media can affect us. First, I would like to know more about how social media can affect children when they use social media more of what they are supposed to use? Because I know that some kids are more on social media than studying, and I also know that at some point of their lives it will have negative consequences on them. Also, I would like to know what are some consequences that people can have if they are using their phone a lot of things to be on social media for more than seven, eight or more hours. It will have negative consequences in their health? And, last, I would like to know how the relationship between children and parents are affected by social media? There are some questions that I would like to know more about social media because everybody uses social media, so social media can affect people everywhere and at any moment of our life.

It is important to know about the negative effect of social media because we do not know when social media is affecting us and we do know even know when happened. Depends in what ways we use social media is how social media is going to be positive or negative for us.
